Sequence 1684, Application US/09920300A

Sequence 1684, Application US/09920300A

Patent No. US20020136728A1

GENERAL INFORMATION:

APPLICANT: King, Gordon E.

APPLICANT: Meagher, Madeleine Joy

APPLICANT: Xu, Jiangchun

APPLICANT: Xu, Jiangchun

APPLICANT: Secrist, Heather

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE THERAPY

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE THERAPY

TITLE OF INVENTION: MAD DIAGNOSIS OF COLON CANCER

FILE REFERENCE: 210121.547

CURRENT APPLICATION NUMBER: US/09/920,300A

CURRENT FILING DATE: 2001-07-31

NUMBER OF SEQ ID NOS: 1789

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 1684

LENGTH: 2261

TYPE: DNA

ORGANISM: Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      β

The invention relates to a novel human apoptosis-associated factor (AAB60386, AAB60387), designated NTZRM1000558, which contains a death effector domain (DED) and a caspase family cleavage domain and is capable of inducing apoptosis in cells. The invention also relates to nucleic acids encoding the protein (AAF27407, AAF27408); variants of the protein

Polynucleotide encoding an apoptosis-associated factor protein with death effector domain and caspase family-cleavage domain, useful in regulating diseases with cell proliferation.

The apoptosis-related factor is useful in regulating diseases associated with cell proliferation and in screening drug candidates e.g., for regulating cell proliferation or cell death in ischaemic diseases and chronic viral diseases. The present sequence represents cDNA encoding a substantial proportion of the human apoptosis-associated factor NT2RM1000558
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Local Similarity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ś
                                                                                                                                                                                                                                              The invention relates to a novel human apoptosis-associated factor CC (AAB50386, AAB60387), designated NT2RM100558, which contains a death CC effector domain (DED) and a caspase family cleavage domain and is capable CC of inducing apoptosis in cells. The invention also relates to nucleic acids encoding the protein (AAF27407, AAF27408); variants of the protein (particularly dominant negative variants); vectors and host cells CC comprising a nucleic acid which encodes an apoptosis - associated factor CC of the invention; the recombinant production of the protein; an antibody CC against the protein; and methods of screening for compounds which can CC regulate apoptosis. The apoptosis-related factor is useful in regulating CC diseases associated with cell proliferation and in screening drug CC candidates e.g., for regulating cell proliferation or cell death in CC candidates e.g., for regulating cell proliferation or cell death in CC candidates e.g., for regulating viral diseases. The present sequence CC represents a full-length cDNA encoding the human apoptosis-associated CC factor NT2RM1000558

Also described: (1) primer and probe for investigation of the DEDD2 gene; and (2) reagents for gene therapy. DEDD2 has cytostatic activity. DEDD2 can be used in the diagnosis and treatment of cancers of the kidney, large intestine and prostate, and acute and characteristic soft by the second of the kidney.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                chronic myeloid leukaemia.

CC polynucleotides. The ARRG polypeptides, polynucleotides and modulators of are useful for diagnosis, treatment and prevention of cell proliferative, climmunological and reproductive disorders. The cell proliferative, cd disorders include cancers, actinic keratosis, arteriosclerosis, atteriosclerosis, bursitis, cirrhosis, hepatitis, psoriasis, and cimmunological disorders include acquired immunodeficiency syndrome (AIDS), adult respiratory distress syndrome, Addison's disease, contact dermatitis, diabetes syndrome, Addison's diseases, contact dermatitis, diabetes mellitus, gout, Graves' disease, cd glomerulonephritis, rheumatoid arthritis, scleroderma, systemic lupus cerythematosus, systemic sclerosis, ulcerative colitis, haemodialysis, cuveitis; viral, bacterial, fungal, parasitic, protozoal, helminthic coliections and trauma. Reproductive disorders include disorders of grolactin production, infertility, endometriosis, polycystic ovary csyndrome, ectopic pregnancies, galactorrhea, abnormal sperm physiology, cd isruptions of spermatogenesis, cancer of testis and prostate, impotence, carcinoma of male breast and gynecomastia. The APRG polynucleotides are useful for creating knockin humanized animals or transgenic animals to model human disease and to detect and quantify gene expression in complete tissues in which expression of APRG, fragments of it and antibodies specific for APRG are useful as clements on a microarray which is useful to monitor or measure protein-colm colm, and collection for a protein interactions, drug-target interactions and gene expression collections collections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel human apoptosis regulator polypeptides and polynucleotides for diagnosing, preventing, treating cell proliferative, immunological ar reproductive disorders and for identifying modulators of therapeutic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention provides human apoptosis regulator (APRG) polypeptides and polynucleotides. The APRG polypeptides, polynucleotides and modulators
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              5; Page 101; 103pp; English

CC domain (DD), death effector domain (DED) or NB-ARC domain. The invention CC is useful for identifying a binding agent, preferably a protein or a drug CC that binds a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC COmain from DAP3, IRAK4, CTDD (Chlamydia trachomatis DD protein), DED or NB-ARC CC domain from DAP3, IRAK4, CTDD (Chlamydia trachomatis DD protein), DED4 or NIDD (NGFR-interacting Death Domain), with a candidate binding agent and CC detecting the association of the domain and the candidate binding agent, CC DAPA (CC detecting the association of the domain and the candidate binding agent, CC demical crosslinking, nuclear magnetic resonance (NMR), mass cc entered of a cell process such as cell proliferation, SPA, ultraviolet (UV) or CC demical crosslinking, nuclear magnetic resonance (NMR), mass cell evel of a cell process such as cell proliferation, cell adhesion, cell stress responses, responses to microbial infection and B cell comunication could be compared to the compared to the cell proliferation, cell adhesion, cell comunication, Cc. preceding the compared to the cell protein is useful for modulating the activity of oncogenic proteins. The protein is useful for modulating the activity of oncogenic proteins, cell contents. The protein and antibody specific for it are useful for compared to the cell division, inflammatory diseases such as sepsis, fibrosis, cell suseful for treating immune-based pathologies, pathologies associated contents the cell division, inflammatory diseases such as sepsis, fibrosis, cell contents and dene therapy. The present sequence is human DED4 dene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               allergy, sepsis, autoimmunity, allograft rejection and other diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New polypeptide comprising a death domain or death effector domain, useful for discovery of drugs that suppress infection, inflammation,
                                               therapy and gene therapy. The present sequence is human DED4 gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 19; Page 184-186; 209pp; English.

                                                                                                               밁
                                                                                                                                                                                 밁
                                                                                                                                                                                                            5
                                                                                                                                                                                                                                                                                                                                                CC The present invention provides novel death Domain (DD) and death effector CC domain (DED) proteins and nucleic acids encoding them. The invention also CC provides death domain containing protein such as Chlamydia trachomatis CC death domain containing protein (CTDD) DD and neural growth factor CC identifying a binding agent (e.g. protein or drug) that binds a DD, DED CC inding agent and identifying an effective agent (e.g. protein or drug) that binds a DD, DED CC that modulates the association of a DD, DED or NB-ARC domain with protein CC that binds the DD, DED or NB-ARC domain. The invention is also useful for CC coll proliferation, cell stress responses, responses to microbial CC infection and B cell immunoglobulin class such as apoptosis, cell adhesion, CC coll proliferation, cell stress responses, responses to microbial CC inflammation, allergy, allograft rejection, sepsis and other diseases. CC inflammation, allergy, allograft rejection, sepsis, have diseases. CC inflammation, allograft rejection, sepsis, keratinocyte autoimmunity, inflammation, allograft rejection, sepsis, keratinocyte (proplasia, neoplasia, keloid, benign prostatic hypertrophy, fibrosis, CC inflammatory hyperplasia and smooth muscle cell proliferation in arteries of following balloon angioplasty (restenosis). The invention is also used in CC antibody therapy and gene therapy. The present sequence is human DED4 cc full length gene. The DED4 gene is located on chromosome 19
                                                                                                                                                                                                                                                     Best Loca

```
CC length coding region of the above nucleotide sequences; or (c) a sequence (c) charing at least 80% identical to (a) or (b); (5) a chimeric polypeptide (c) am isolated antibody that binds to the above polypeptide; (6) cc an isolated antibody; (8) an isolated oligopeptide that binds to the above polypeptide; (7) a process (c) the above polypeptide; (9) a tumour-associated antigenic target (TAT) cc binding organic molecule that binds to the above polypeptide; (10) a composition of matter comprising the above (chimeric) polypeptide; (10) a cc composition of matter contained within the container; (11) methods of the composition of matter contained within the container; (12) methods of cinhibiting the growth of a cell that expresses the above protein, where created above portein in a sample suspected of containing the protein cally treating a mammal having a cancerous tumour comprising cells that express the above protein; (13) a method of described above; (15) methods of disposing the presence of a protein in a sample suspected of containing the protein cassociated with increased expression or activity of the above correcting and (17) a method of binding an antibody, oligopeptide or corganic molecule to a cell that expresses the protein described above. CC protein; and (17) a method of binding an antibody, oligopeptide or corganic molecule to a cell that expresses the protein described above. CC protein; and (17) a method of binding an antibody, oligopeptide or corganic molecule to a cell that expresses the protein described above. CC protein; and contained with increased expression or activity of the above protein; and can be used in gene cc a medicament for the therapeatic treatment or diagnostic detection of a cell proliferative disorder or cancer. The present sequence represents a containing or treating cancer or diagnostic detection of a cell proliferative disorder or cancer. The present sequence represents a containing or treating cancer or diagnostic detection of a cell proliferative disorder or cancer. Th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes an isolated tumour-associated antigenic target (?AR!) nucleic acid comprising: (a) any of 4622 nucleotide sequences (see SEQ ID NO:1 to 4622); (b) the full-length coding region (a); (c) the complement of (a) or (b); (d) a sequence that has 80% sequence identity to (a)-(c); or (e) a sequence that hybridises to (a)-(c). Also described: (1) an expression vector comprising the above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         nucleic acid; (2) a host cell comprising the above expression vector; (3) a process for producing a polypeptide; (4) an isolated polypeptide comprising: (a) an amino acid sequence encoded by any of the above nucleotide sequences; (b) an amino acid sequence encoded by the full-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (GETH )

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to the isolation of genes encoding 9 human apoptosis-related proteins. The nucleotide sequences AAA95790-A95798 encode the human apoptosis related proteins aAB1559. The genes can be used to generate fusion proteins by linking to the gene for the human immunoglobulin G Fc (IgG Fc) portion (AAA95799) for increasing the stability of the fusion protein as compared to the human protein only. The gene and encoded protein may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate apoptosis associated protein expression, e.g. cancer (e.g. colon, breast and prostate cancer, melanomas and lymphomas), inflammation, autoimmune disorders (e.g. colon) multiple sclerosis) and viral infections (e.g. herpes))

AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to

supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent sequences used in the exemplification of the present invention. N.B. Pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027 to 1052, 7921 and 7922

                                                                                                                                                                                                                                                                                               CC associated proteins represented in AABS8106 - AABS8548. Lung cancer CC associated proteins and polymucleotide sequences, their agonists, and CC antagonists may have neuroprotective; cytostatic; cardioactive; and CC antagonists may have neuroprotective; cytostatic; cardioactive; and CC immunomodulatory; muscular active general; vulnerary; gastrointestinal CC general; nephrotropic; antiinfective; gynecological; or antibacterial CC general; nephrotropic; antiinfective; gynecological; or antibacterial CC or polymucleotide sequences. The lung cancer associated polymucleotide cor polymucleotide for detection of lung cancer, chromosome CC identification, as chromosome markers, and for numerous other diagnostic CC research purposes. The proteins may be used to treat disorders such as CC neural, immune, muscular, reproductive, gastrointestinal, pulmonary, CC cardiovascular, renal, and proliferative disorders. The proteins may also be used in the treatment of wounds and infectious diseases.

CC Polymucleotide sequences AAF18425 - AAF18433 and peptide AAB58549 are CC used in the course of the inventoriae and protein acceptance.

                                                                                           S
                                                                                                                                                                                                                                                         CC ABL39691 to ABL39818 represent novel human nucleic acid sequences CC encoding the proteins given in ABB06037 to ABB06164. The novel sequences CC (NS) can have cytostatic, osteopathic, gynaecological, neuroprotective, CC anticheumatic, antiarthritic, antipsoriatic, opthalmological, virucide, crossoropic, antiarteriosclerotic, antiinflammatory, dermatological, canorectic, muscular, anti-HTV, antiinflammatory, dermatological, CC anticoagulant, antifibrinolytic, hypotension, antiasthmatic, cardiant, CC immunomodulator, antifibrinolytic, hypotension, antiasthmatic, cardiant, CC antidepressant, gastrointestinal, aeuroleptic, cerebroprotective, CC notropic and contraceptive activities. The NS can be used in vaccines, CC gene therapy and antiense therapy. Nucleic acids, expression vectors and CC diseases, from the present invention can be used for treating and CC diseases, generation, multiple sclerosis, endometriosis, degenerative cataracts, restenosis, atherosclerosis, inflammation, skin disorders, CC glaucoma, obesity, muscular dystrophy, AIDS, infertility, cardiovascular CC disease, pollepsy, angina, neurodegeneration, diabetes, anxiety, CC depression, schizophrenia, viral disease, gastric ulcers, stroke, CC Alzheimer's disease and as a contraceptive
                                                                                                                                            Query Match

The present invention relates to the isolation of novel cDNA sequences CC which encode human secreted proteins. The cDNA sequences have been CC derived from a variety of human tissues. The invention also provides a CC method for producing proteins from these polynucleotide sequences. The CC activity and production, and the cell is also useful for identifying compounds that modulate their CC compounds that modulate expression of the polynucleotide sequences of cencoding the secreted proteins. The sequences of the invention are useful for treating diseases such as hyperproliferative disorders (e.g. cancer), CC immune deficiency disorders (e.g. severe combined immunodeficiency of infections disorders (e.g. multiple sclerosis), blood disorders (e.g. thrombocytopaenia), inflammatory disorders (e.g. arthritis) and CC (e.g. thrombocytopaenia), inflammatory disorders (e.g. arthritis) and CC infectious disorders (e.g. hepatitis). The polynucleotide sequences of the invention are also useful in gene therapy. AAS62214-AAS62838 CC represent the CDNA sequences of the invention that encode for novel human created proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              antiarthritic; immunosuppressive; antibacterial; endocrine; cardiant; central nervous system, virucide, anti-HIV; fungicide; antimutegen; cardiovascular; antianaemic; antiangeregant; haemostatic; vulnerary; antiuleer; osteopathic; dermatological; antiallergic; antiasthmatic; antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic; antiparkinsonian; and immunostimulant. The proteins and polynuclectides encoding them can be used in gene therapy, antisense therapy and vaccine production. The proteins and polynucleotides are useful for screening for agonists or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, rehumatoid arthritis, septic shock, pancreatitis, cardiac dysfunction, neuropathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal infections, autoimmunity, genetic disease, haematopoietic disorders, anaemia, platelet disorders, thrombocytopaenia, wounds, burns, ulcers, osteoporosis, severe combined immunodeficiency, eczema, allergic rhinitis, asthma, diabetes, cancer, multiple sclerosis, depression, altergic disorder, parkinson's disease, neurodegenerative and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    579
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               831
```

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as `Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression,

Claim

No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               eeq

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Submitted (20-JUL-2004) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr - Web : www.genoscope.cns.fr)

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Contact : Feng Liang Email : fliang@lifetech.com URL : http://fulllength.invitrogen.com/ InvitroGen Corporation

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Homo sapiens (human)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       For more information about this cluster, see http://www.genoscope.cns.fr/cdna?s=CSODK010BF08QP1&c=9074

18t Strand CDNA was primed with a NotI-Oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
9074.r
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   BX374729 1091 bp mRNA line

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pcMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 (bases 1 to 951)
